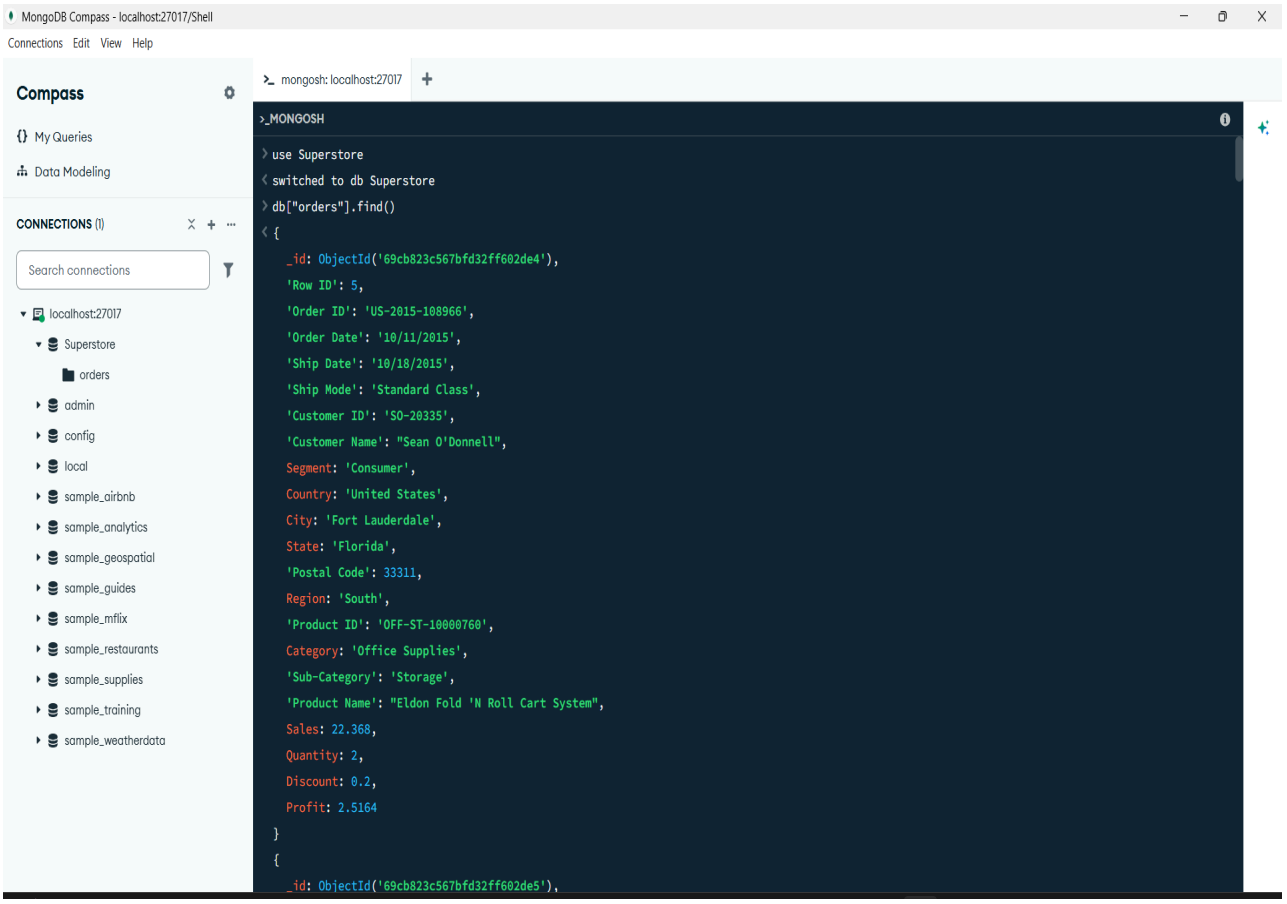
Practical Questions-MongoDB

Q2: Retrieve and print all documents from the Orders collection:

Answer: The query is as follows:

db.orders.find()

Output:

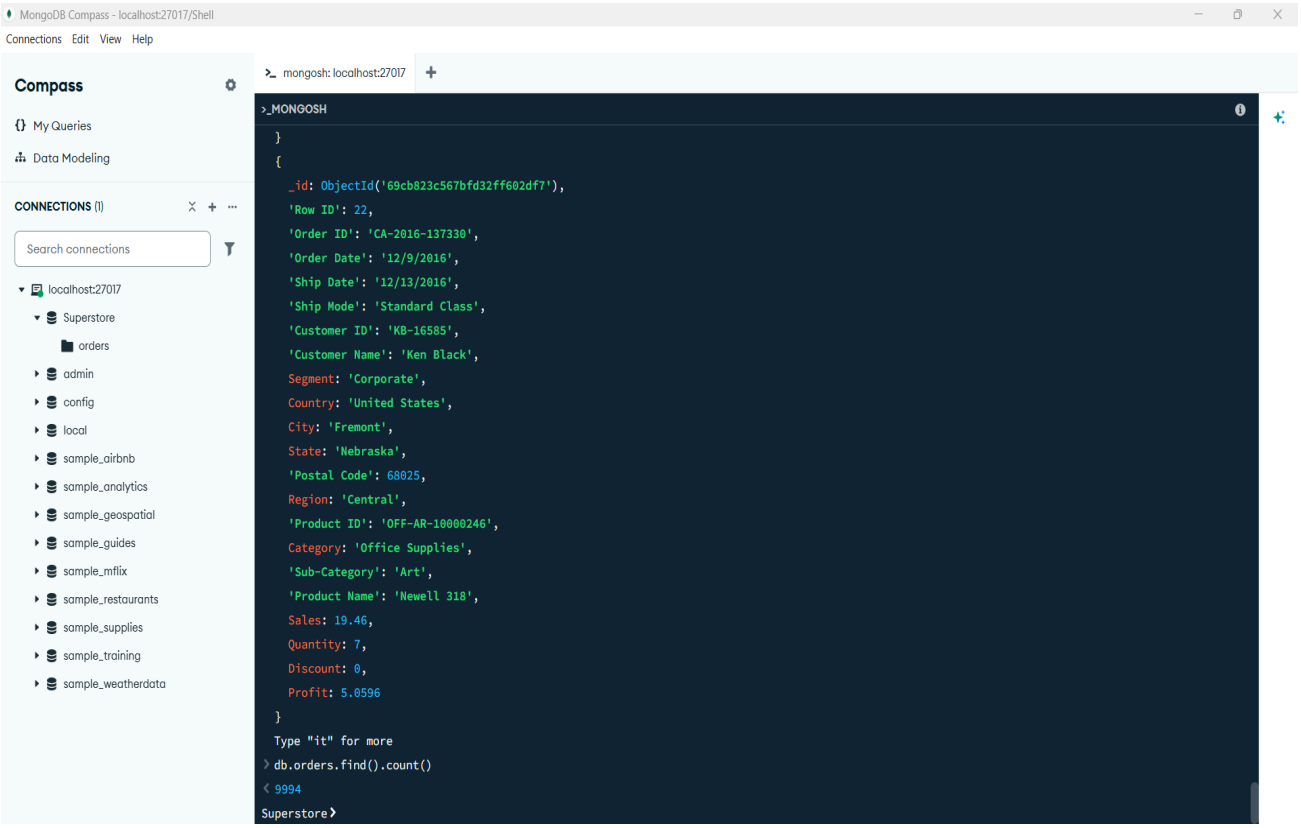


Q3: Count and display the total number of documents in the Orders collection?

Answer: The query is as follows:

db.orders.find().count()

Output:

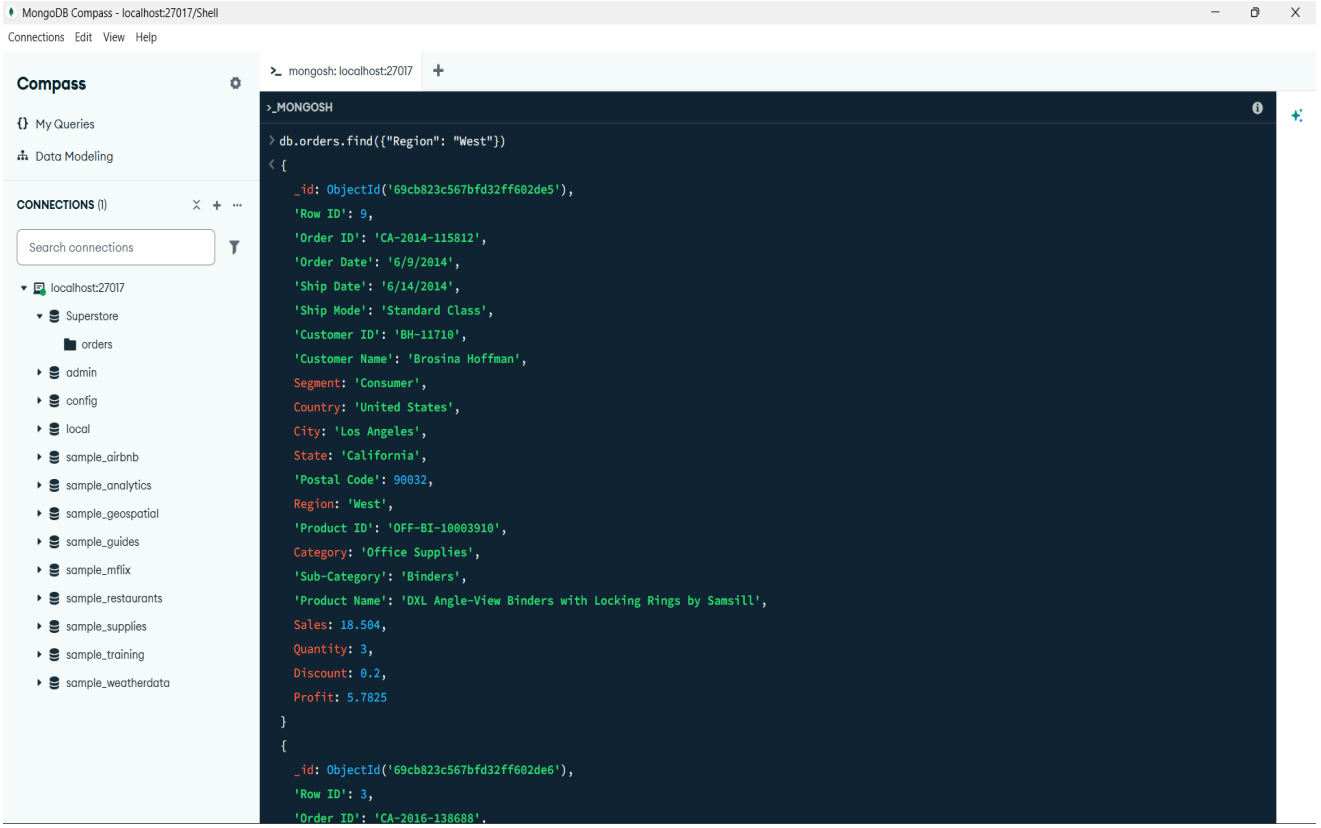


Q4: Write a query to fetch all orders from the "West" region?

Answer: The query is as follows:

db.orders.find({“Region”:”West”})

Output:

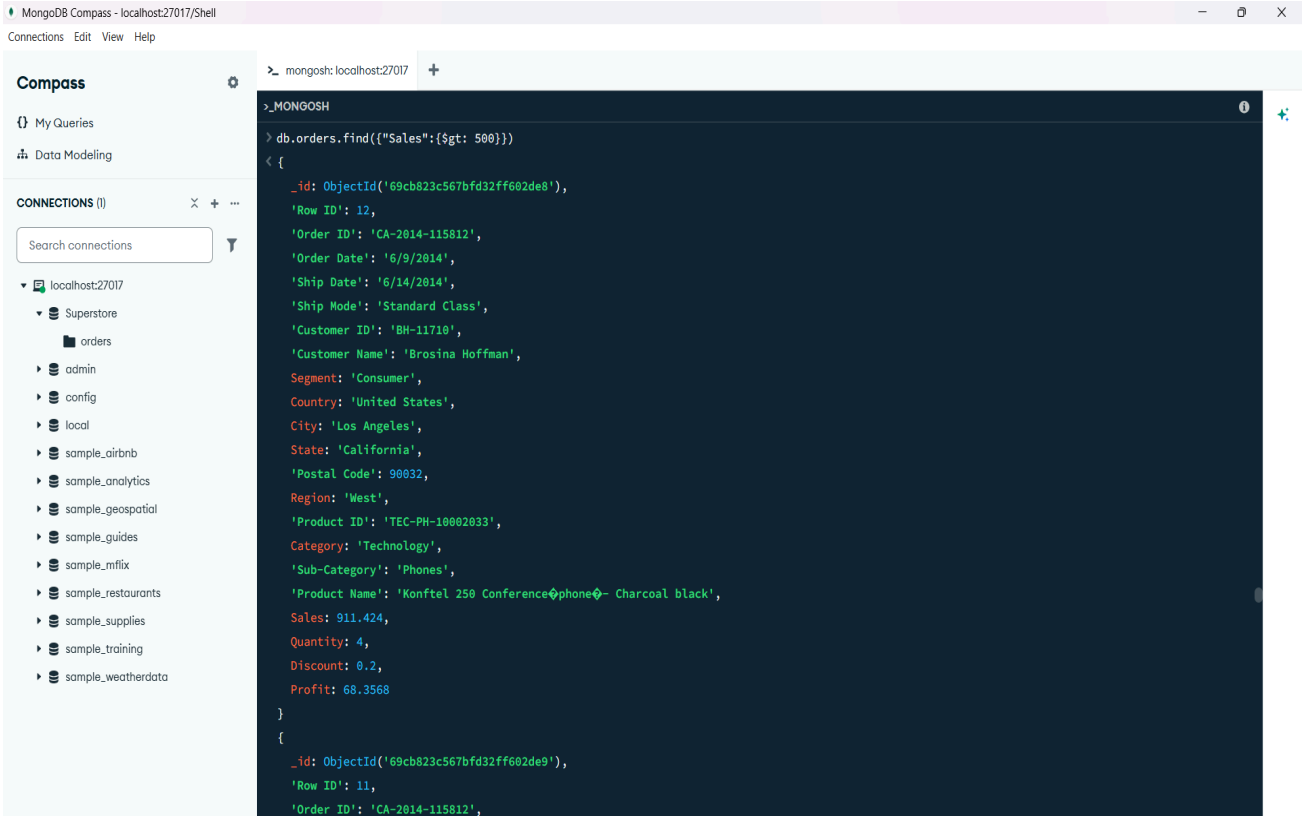


Q5: Write a query to find orders where Sales is greater than 500?

Answer: The query is as follows:

db.orders.find({“Sales”:{$gt: 500}})

Output:

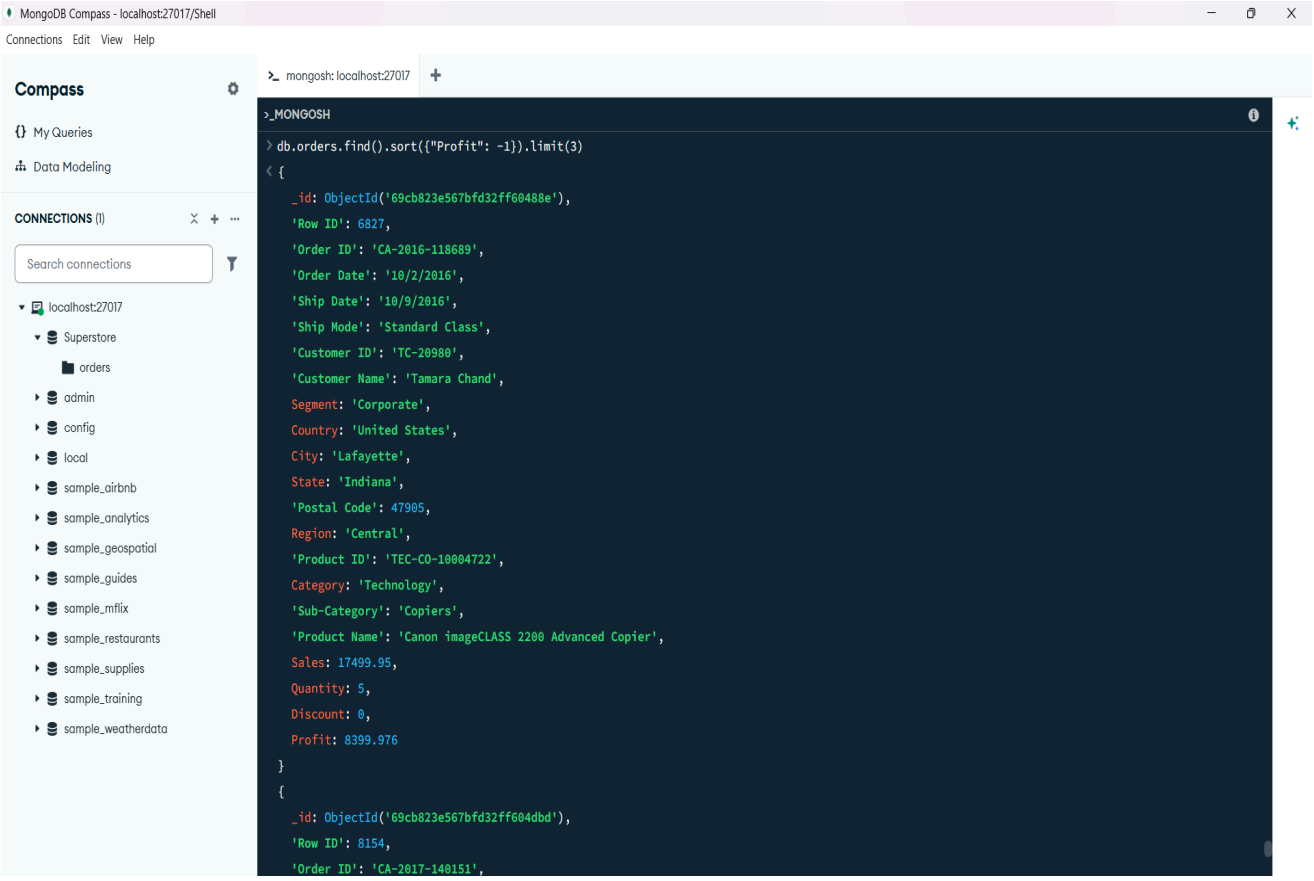


Q6: Fetch the top 3 orders with the highest Profit?

Answer: The query is as follows:

db.orders.find().sort({“Profit”: -1}).limit(3)

Output:

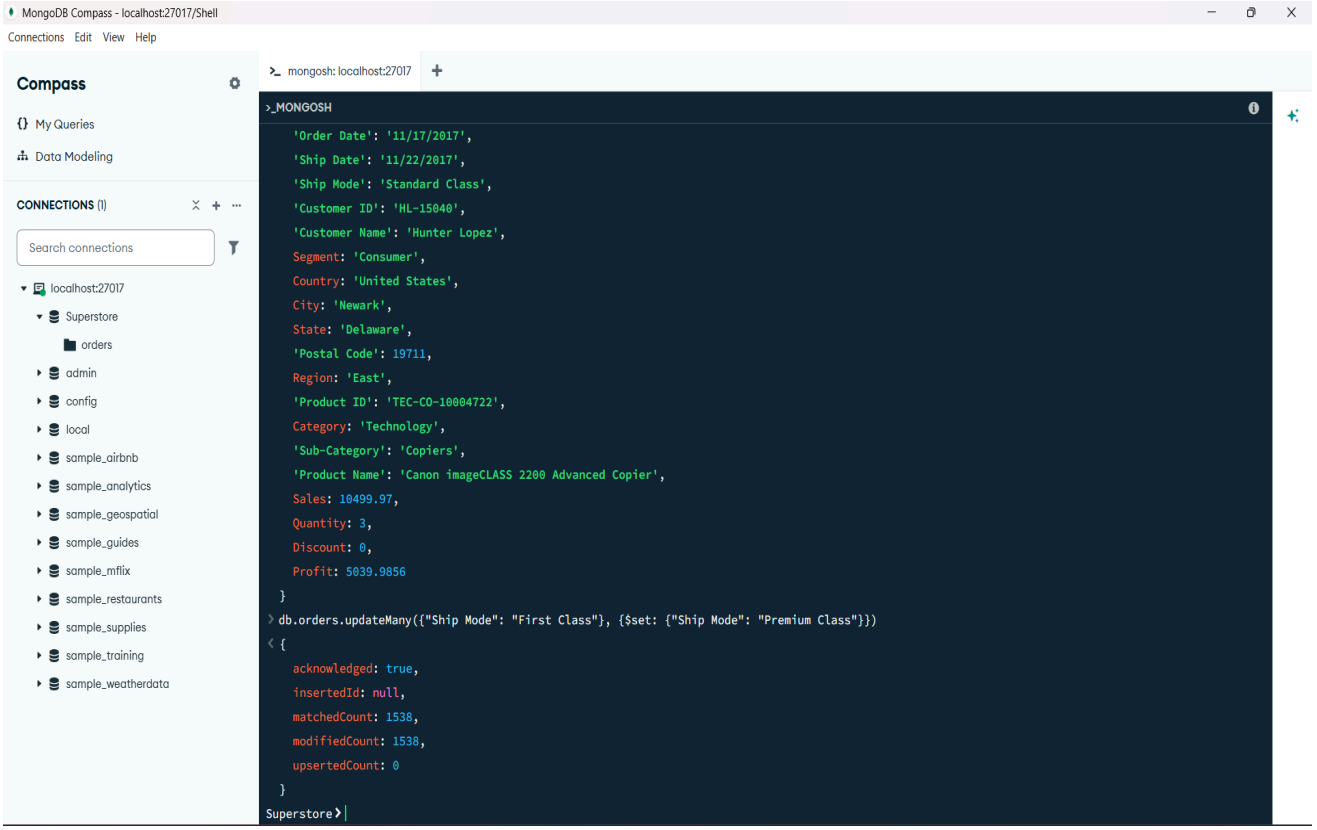


Q7. Update all orders with Ship Mode as "First Class" to "Premium Class?

Answer: The query is as follows:

db.orders.updateMany({“Ship Mode”: “First Class”}, {$set: {“Ship Mode”: “Premium Class”}})

Output:

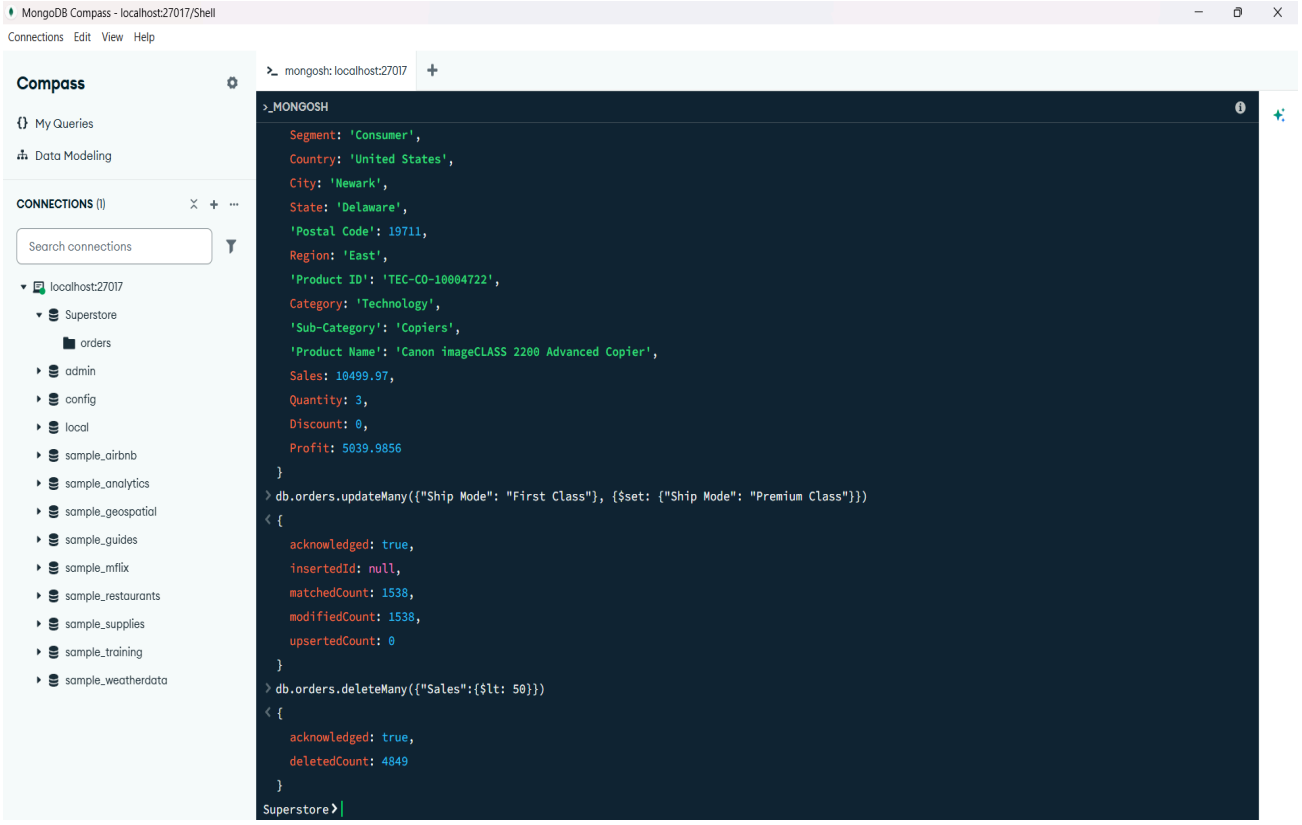


Q8. Delete all orders where Sales is less than 50?

Answer: The query is as follows:

db.orders.deleteMany({“Sales”:{$lt: 50}})

Output:

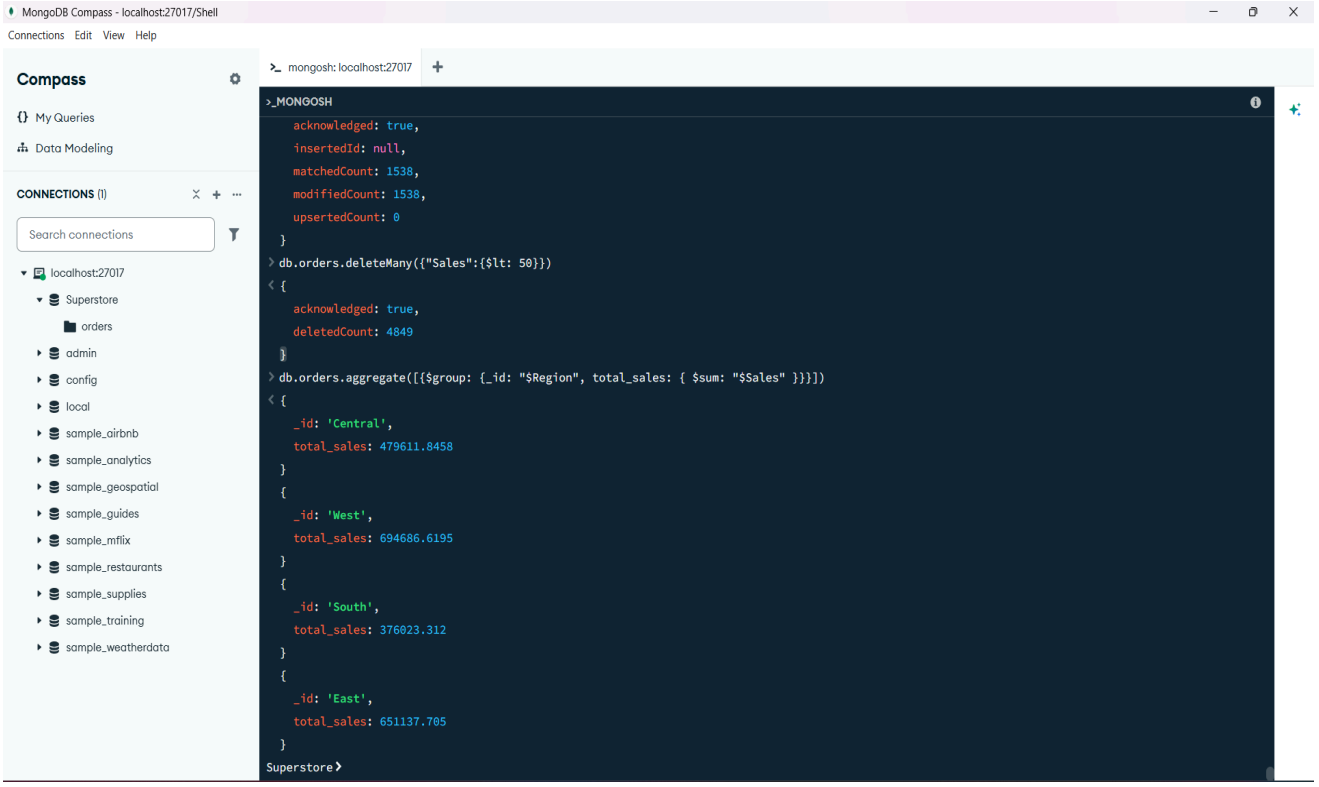


Q9: Use aggregation to group orders by Region and calculate total sales per region?

Answer: The query is as follows:

db.orders.aggregate([{$group: {id: “$Region”, total_sales: {$sum: “$Sales”}}}])

Output:

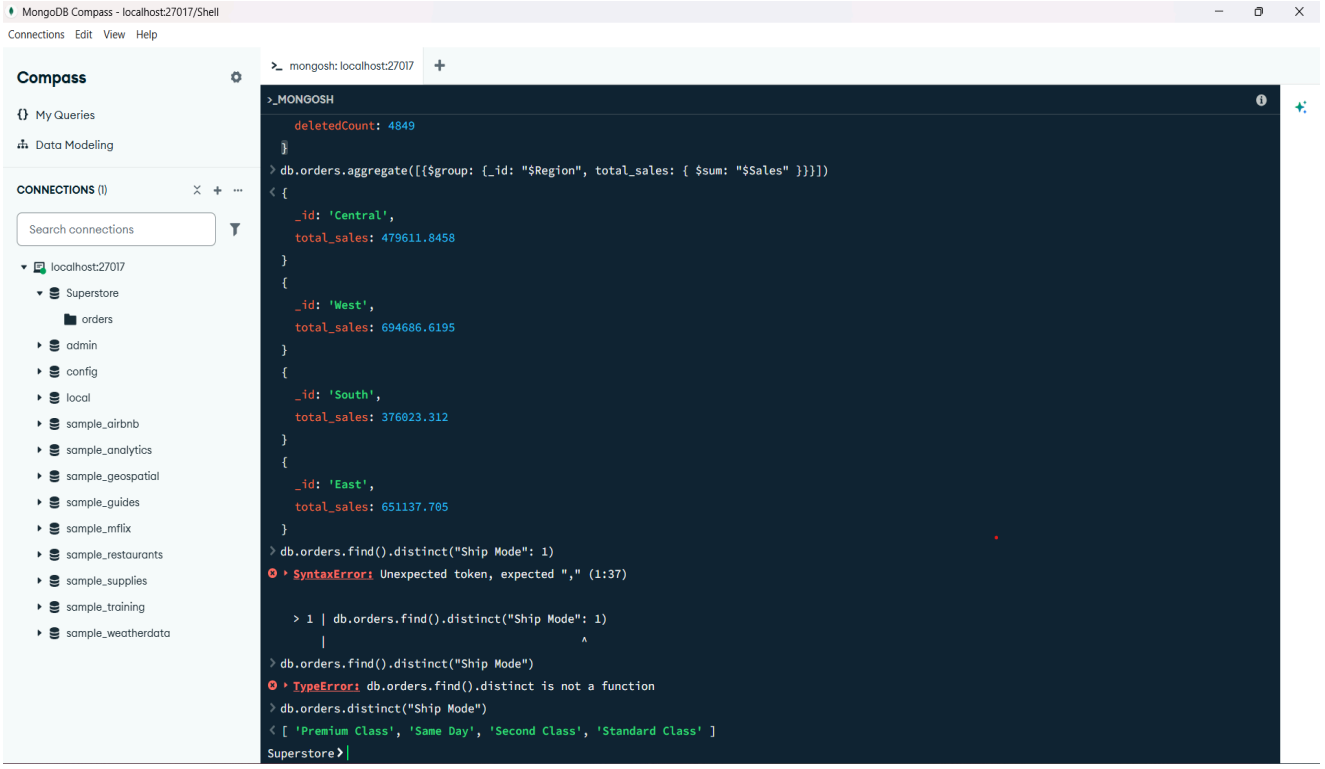


Q10: Fetch all distinct values for Ship Mode from the collection?

Answer: The query is as follows:

db.orders.distinct(“Ship Mode”)

Output:



Q11: Count the number of orders for each category?

Answer: The query is as follows:

db.orders.aggregate([{$group: {_id: "$Category",order_count: { $sum: 1 }}}])

Output:
